## PREFACE :

Title	Policy on Sustainable Production
Version Number	1.00
Effective Date	9th-May 2020
Authorised by	Board of Directors
Number of Revisions	0
Last Revised Date	N.A

## POLICY ON SUSTAINABLE PRODUCTION

MAM believes that minerals have a major role in assisting the transition towards a sustainable economy where economic growth, conservation of environment and social responsibility work together. Towards this, MAM strives to:

- Ensure resource-efficient and sustainable manufacturing processes and technologies to produce the various marketable products
- Focus on product stewardship throughout the life cycle of MAM's products (design and disposal) and provide information on their safe use and recycling
- Review and implement new developments in mineral beneficiating technologies, practices and sourcing, which have lower impact on environment and boost community development with complete respect for intellectual property rights and related issues
- Optimise utilisation of natural resources viz. water, raw materials, energy while focusing to reduce, reuse and recycle opportunities of these resources.
- Establish and maintain Environment Management Systems (EMS) across all operations to continuously monitor and improve our environmental performance and operating efficiency.

MAM is committed to measure and report progress against this policy and review performance on a periodic basis to ensure its implementation.
